4X4 LCD Video Wall

Designing overhead video walls and clusters of loudspeakers into large facilities requires lifts and heavy rigging to complete a permanent installation and is expected as part of the overall project cost. Servicing them at a future date is less predictable and often times it is not practical or even possible to get a lift back into the installation area. Other installations require multiple height positions, such as in sporting venues and entertainment venues.

In these cases, equipping the video wall or speaker cluster with its own hoist system allows the entire rig to go up and come down at the push of a button. Let Adaptive engineer the hoist and electrical system to build in height flexibility and assure trouble-free service and maintenance.
