

# AF-PF1-IB Backing Plate (500 lb. WLL)

BEAM-WARE

Creating suitable overhead structural suspension points for rigging systems can be difficult so using the building's own structure can provide more options for the installer. Standard, pre-engineered beam clamps attach to the building's beam structure and offer an easy, safe and predictable method of suspension. The stainless steel screw drive style adjusts to both small and medium flanged beams but is constructed from stainless steel for outdoor applications.

#### SPECIFICATIONS:

**Part Number:** AF-PF1-IB

**Diameter:** 3.5"

**Color:** Black

**Design Factor:** 10:1

**WLL:** 500 lb / 227.3 Kg. (VERTICAL)
