

Safety Cable

Installation Instructions SC-025

These safety cable secures speakers to wall and ceiling structures as a safety back up for wall and ceiling mounting brackets.

SC-012	12" Safety cable with angled washer
SC-016	16" Safety cable with angled washer
SC-025/B	25" Safety cable with angled washer
SC-040	40" Safety cable with angled washer

Warning:

Mounting and/or rigging loudspeakers requires experienced professionals. Improperly installed loudspeakers can result in property damage, personal injury, death and/or liability to the installing contractor.

For a trouble free installation, please read and follow these instructions carefully before you begin.

Step 1. Attaching to the Speaker:

Locate a threaded mounting point of the speaker that is not used for mounting. Permanently attach the angled washer at the end of the cable to the speaker's mounting point using a suitable bolt or screw and washer. Be sure to use a washer that is wider than the hole of the angled washer. Tighten bolt or screw permanently (Figure 1).

If there is no other mounting points on the speaker, use the mounting points used by the mounting bracket. Be sure to secure the speaker first before attempting to remove the bolt or screw of the bracket. Slowly remove the bolt or screw from the bracket then insert the bolt or screw through the bolt's washer and through the hole of the angled washer of the safety cable. Replace the bolt or screw with the safety cable through the bracket and speaker. Tighten bolt or screw permanently (Figure 2).

Step 2. Attaching to wall or ceiling structure:

Secure the other end of the safety cable to a wall stud or a ceiling beam using suitable mounting hardware. Be sure to use a washer that is wider than the hole of the angled washer. Be sure to provide enough length of the safety cable for the speaker to tilt into position (Figure 3).

The wall or ceiling structure, where the cable is attached, must be capable of supporting at least ten times the weight of the speaker.
